Experience

Tech Lead, Logcomex – (Hybrid) Curitiba, Paraná Aug 2025 – Present

- Facilitated developers' daily needs, including DevOps requests, environment configuration, and feature architecture support.
- Translated external technical requirements into development tickets and contributed technical insights for product planning and estimations.
- Conducted 1:1 feedback sessions with developers to address concerns, improve sprint outcomes, and foster team alignment.
- Collaborate as a hands-on developer by implementing new features and resolving bugs.

Senior Full-Stack Software Engineer, Logcomex – (Hybrid) Curitiba, Paraná Jan 2023 – Aug 2025

- Spearheaded backend and frontend migration of the company's most critical application, addressing security issues and deprecated dependencies in production. The new architecture brought cycle time down by 50%.
- Leveraged SOLID principles to build scalable and maintainable solutions.
- Focused on code and microservices architecture, TDD, event-driven patterns, and refactoring legacy components.
- Actively collaborated with product and business teams to understand customer needs and deliver impactful solutions.
- Supported team growth through mentoring, pair programming, and knowledge sharing.
- Facilitated the adoption of AI-assisted code generation and code review across the team, enhancing development efficiency and overall productivity by at least 20%.

Full-Stack Software Engineer II, Logcomex – (Remote) Curitiba, Paraná Jan 2021 – Jan 2023

- Spearheaded backend development for a new highly configurable BI product relying on minimal pre-configuration and full data lake integration, bringing down configuration time for new datasets by 75%..
- Leveraged PHP Laravel and VueJS to develop and maintain the company's most-used SaaS BI product used for tracking, prospecting, and analyzing supply chain data.
- Gained experience with microservices, distributed systems, and SaaS development practices.
- Acted as the Code Owner of the backend repository, conducting code reviews and ensuring adherence to best practices.
- Resolved technical debt and improved unit testing coverage reaching the company's goal of 80% coverage.
- Participated in sprint ceremonies and contributed to architectural and tooling decisions.

Full-Stack Software Engineer I, NTT Data – (Hybrid) Curitiba, Paraná Nov 2018 – July 2021

- Provided N2/N3 support for Telefônica (retail), ensuring real-time data integrity and unlocking business operations.
- Developed and maintained systems for Telefônica (corporate) in high-expertise environments using Java.
- Production experience with Oracle, SQL, and PL/SQL, while also contributing to feature development in Siebel.

Full-Stack Software Engineer I, Sigma Dataserv – (On-site) Curitiba, Paraná Sept 2017 – Nov 2018

- Developed and enhanced features for government web applications using Java EE with JSF and PrimeFaces as the primary technology stack.
- First experience in web development, collaborated closely with senior developers on diverse and challenging problems.
- Strengthened both technical and communication skills in a fast-paced environment.
- Gained foundational knowledge in backend and frontend development and learned the value of teamwork.

Education

School – Associate's Degree in Computer Science

Nov 2021

School – High School Diploma + Vocational Training in IT

Sep 2015
